

## Press Release

### **Wacker Neuson expands light equipment portfolio**

**New products align even more closely with customers' needs and processes**

**(Munich, January 19, 2010) Wacker Neuson SE is set to unveil numerous new products and product variants from its light equipment portfolio at bauma 2010. As with all Wacker Neuson equipment, the innovative new machines are geared toward the construction industry and will help companies in construction, gardening, landscaping and related sectors to further optimize processes.**

#### **Vibratory plate delivers same power as 7t roller**

The DPU 130 from Wacker Neuson is the world's most powerful and modern vibratory plate. The remote-controlled plate is pushing out the boundaries of vibratory plate performance by delivering enough compaction performance to replace small and medium-size compaction rollers weighing up to seven tons. The DPU 130 is also raising the bar in safety and user friendliness for soil compaction jobs. In addition to delivering best-in-class performance, the remote-control plate is designed for extreme flexibility and is significantly more maneuverable than even large walk-behind vibratory plates. The infrared remote control ensures that operators can work safely and are not affected by emissions or vibrations.

#### **Electric breaker EH 25 delivers outstanding percussion rates**

Wacker Neuson's demolition field is launching an electric breaker developed for intensive use over long periods of time. The EH 25 delivers impressive percussion power. Its percussion system is designed for extremely low maintenance and minimum levels of wear and tear, making it an extremely cost-efficient choice with high availability levels. The EH 25 is equipped with Wacker Neuson's proven hood spring mounting concept, a feature that has already been used on breakers such as the BH 24 to give them their extremely high levels of user friendliness. With a hand-arm vibration value below  $5 \text{ m/s}^2$ , the device can be deployed for an entire eight-hour working day by the same operator.

#### **New series of vibratory plates with excellent ergonomics**

In the field of soil and asphalt compaction, Wacker Neuson is also unveiling a new range of WP-series vibratory plates weighing up to 105 kg. The plates were developed with operators

## Press Release

and their requirements in mind. Thanks to a specially formed base plate, the machines deliver outstanding compaction performance along edges without damaging hot asphalt surfaces when they are turned quickly. Their outstanding design makes the plates particularly easy and comfortable to handle, helping operators make light work of all jobs.

### **A new generation of gasoline cut-off saws**

Wacker Neuson's proven cut-off saws are set to be replaced by a new generation of devices at bauma 2010. The BTS 630 and BTS 635 are aimed at professional users looking for the highest performance standards. The new air filter concept featured on these cut-off saws guarantees long service life and significantly less downtime. The high-torque engine ensures impressive cutting performance. The machines are also easy to operate and start reliably.

### **New submersible pumps extend broad pump range**

Wacker Neuson is enhancing its extensive pump portfolio to include new submersible pumps. The new electrical submersible pumps in the PS series are designed to handle high flow volumes and lifts and are therefore especially well suited to rapid, easy dewatering. The new subgroup in the PS series can reliably handle clear and trash water, as well as waste water and liquid containing fibrous particulate matter. The machines feature integrated cutting equipment that reliably break up fibrous particulate matter.

### **About Wacker Neuson**

Wacker Neuson SE is a global manufacturer of light and compact equipment. With over 30 affiliates and more than 180 sales and service stations across the globe, the new company offers an unparalleled product portfolio. Almost all products manufactured by the company are branded Wacker Neuson. The only exceptions to this in Europe are Kramer-branded all-wheel loaders and Weidemann-branded agricultural machinery, which the company plans to strengthen and expand. With over 300 product categories and complementary rental, spare parts and repair services, Wacker Neuson is the partner of choice among professional users in construction, gardening, landscaping and agriculture, as well as among municipal bodies and companies in the industrial and recycling sectors.
